

FACE TO FACE CONSULTATION UNDER CURRENT HEALTH RESTRICTIONS

Please note the following

- We can operate freely under the traffic light system
- As your healthcare provider your safety comes first, and we need to ensure that there is no potential for onward viral transmission from within a health setting.
- If you are **unvaccinated, please advise us** of this, this is not a judgement, but we need to consider appropriate PPE requirements.
- You are required to wear a **face mask** and **sign in** using the COVID tracer app.
- Please ensure that you notify us if you have any symptoms or have been to a place of interest –

New or worsening cough

Recent onset of fatigue

Sneezing and runny nose

Fever

Sore throat

Shortness of breath

Loss of smell or taste

New headache

What we will do to mitigate risk

- Screen patients for symptoms and/or contact with known cases prior to entry onto the premises.
- Undergo weekly testing (where possible) to layer and further protect you.
- Use appropriate sterilising and cleaning procedures as outlined by the Ministry of Health (surfaces and contact points between visits).
- Ensure appropriate ventilation where possible – doors, windows, and air purification (HEPA filters).
- Ensure use of QR codes and record keeping are adhered to.

You should be aware that whilst all possible mitigation procedures will be considered there is still a risk (although small) of transmission in close contact environments. You should consider this risk and the potential impact of extending your bubble on your health and others in your family.
